

Inouï : les Américains mettent l'ivermectine sur la liste des traitements du Covid !

écrit par Pikachu | 3 septembre 2022

Antiviral Therapy

These sections summarize the data on ritonavir-boosted nirmatrelvir, remdesivir, and other antiviral medications.

Antiviral Therapy Summary Recommendations

Review the Panel's recommendations on the use of antiviral therapies in patients with COVID-19.

Remdesivir

Remdesivir is a nucleotide analogue prodrug that is approved to treat COVID-19 in certain patients.

Ritonavir-Boosted Nirmatrelvir (Paxlovid)

Read about using ritonavir-boosted nirmatrelvir in patients with COVID-19.

Molnupiravir

Read about using molnupiravir in patients with COVID-19.

Interferons

Interferons are a group of antiviral cytokines that are being evaluated to treat COVID-19.

Ivermectin

Ivermectin is an antiparasitic drug that is being evaluated to treat COVID-19.

BREVE

Le site du NIH (National Institute of Health, c'est-à-dire le Ministère de la Santé américain), affiche désormais sur sa page de présentation des traitements contre le covid, l'Ivermectine !

Il y a bien une réserve exprimée (« ce traitement est en cours d'évaluation »), mais il y figure bel et bien.

A quand l'entrée de l'Hydroxychloroquine ?

A voir absolument ici :

<https://www.covid19treatmentguidelines.nih.gov/therapies/antiviral-therapy/>

Et dire que mentionner l'Ivermectine comme traitement du Covid entraîne la censure sur Twitter ou sur YouTube !
